

UrbanCart Analytics - Executive Summary

Decision-ready results from ecommerce.db, the legacy customer export, and the 2024 supplier catalog.

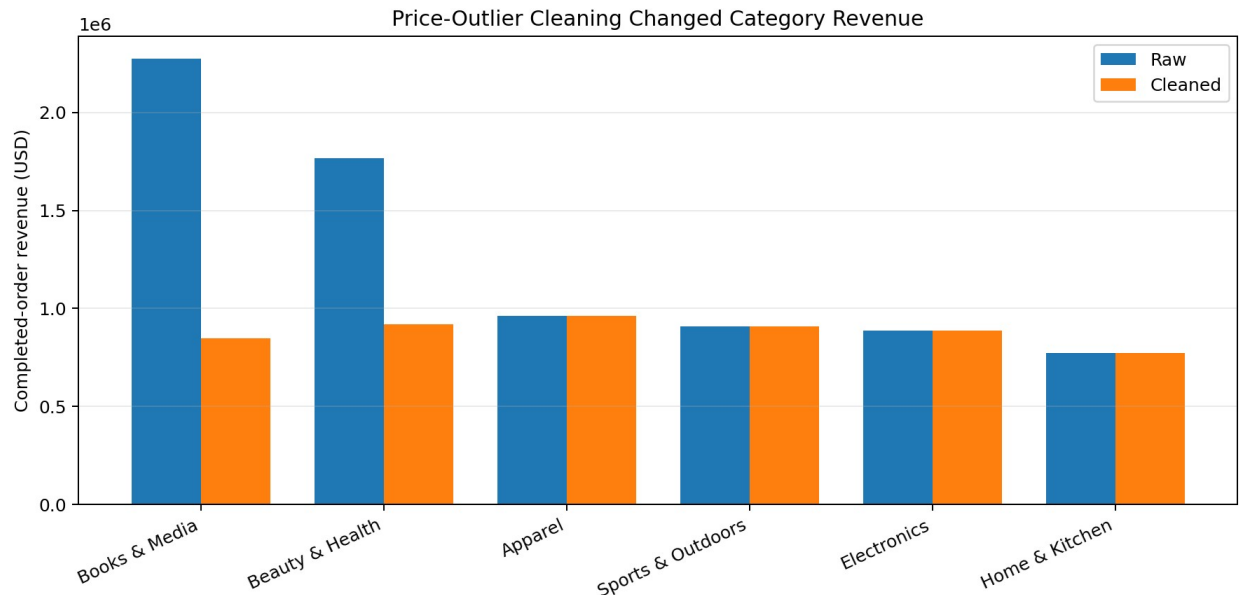

Top customer segment	Highest-margin category	Top 30-day stockout risk
Loyal \$2,334,550.52	Electronics 52.40%	Those Non-Fiction 69.26%

Five findings

- Loyal customers contribute the most cleaned completed-order revenue (\$2,334,550.52).
- Cleaning three extreme prices changed the leading revenue category from Books & Media to Apparel.
- Electronics has the strongest effective margin after discounts, returns, and product cost (52.40%).
- Rating and repeat purchasing have correlation 0.076; ratings alone are not a reliable retention predictor.
- The baseline forecasts \$234,675.01 in 2025-01 and \$239,406.69 in 2025-02, with high uncertainty because R-squared is 0.893.

Recommended actions

- Correct source product prices and add price-to-cost validation.
- Run RFM segmentation monthly and prioritize retention of Champions and Loyal customers.
- Review top-five stockout risks with supplier lead time before purchasing.
- Track seven-day conversion by device/country with minimum sample thresholds.
- Upgrade the forecast to a seasonal model with promotions and availability data.

Most important control finding: raw price anomalies materially changed the category conclusion.
